
4 Nozzle Reduction Tool

Patented Reduction Tool (Pat. 6,470,605B1) allows for simultaneous reduction and removal of soil by a single operator. Four nozzle, two cutting peripheral clearance and two crossing to dislodge the core, provide maximum penetration in most soils. The limited pressure of the tool helps avoid damage and buried utilities.

For Reduction Tool Extension

5' (1.5 m) Extension attaches to Reduction Tool to provide the ability to reach greater depths. Top Head Assembly is removed from Reduction Tool and the Extension locked into place, water hose connected, and Top Head reattached to rear of the extension.

Vacuum Remediation Tool

Vacuum Tool for Wet/Dry remediation where no digging is required.

Valve Box Cleanout Tool

Used for removing debris from valve box prior to exercising the valve head or shutting down line in case of an emergency.

Vacuum System Accessories

Pavement Sweeper With Wheels

Used for cleanup of spoil on concrete or asphalt surfaces following digging or vacuuming operation. Two high pressure water jetters dislodge dirt, as the vacuum stream removes the debris to the collection tank.

Lawn Sweeper

Used on lawns to remove Bentonite and/or polymer that has seeped to the surface during the drilling operation. Smooth configuration of pick-up head reduces damage grass during the operation.

Spray Wand

Adjustable nozzle allows for cleanup of other tooling and the unit itself after operation. A spring-loaded trigger is provided for operator convenience.
